Many of these customers also receive funding through the FCC's Healthcare Connect Fund. Federal funding is available for some locations which pays 65% of the cost to connect to Spirit Healthcare Network for eligible locations and services. Though this is a great benefit for those eligible locations, some who do not qualify for funding still see the benefit to being on the Spirit Healthcare Network. They see the value in having access to a secure, high-performance platform for important healthcare initiatives such as telemedicine, imaging transfers and electronic health/medical records. SHN can enable easy access to academic centers, hosted electronic medical records, data centers, clinical consultants and patient/professional continuing education resources.
