

SPIRIT IaaS

PRODUCT SHEET

Many organizations want to free themselves from maintaining at least some portion of their IT infrastructure. Owning and maintaining a local data center has physical and security requirements that are becoming increasingly complex to manage.

At the physical level, you need to maintain servers and storage arrays, as well as power sources, backup power supplies, and generators—not to mention enabling your business continuity plan.

Resources are expensive and often require the frequent training of qualified IT professionals to keep pace with a constantly changing IT infrastructure and platforms. Due to these challenges, organizations are reevaluating which IT core competencies should remain in their organization and which ones are more efficiently delivered by an enterprise cloud service provider.

SPIRIT IaaS

Spirit's Infrastructure as a Service combines compute and storage resources—including encrypted storage and flash—with intelligent software to create a seamless solution that alleviates the pain of deploying and managing IT infrastructure.

Our software-driven computing platform takes the data center headache out of customer managed server environments allowing them to focus on the deployment and functionality of their operating system and applications. The customer's server equipment is replaced by the Spirit cloud equivalent providing them with a hardened, scalable, resilient, private, secure datacenter environment where they can build, scale and manage their software infrastructure.

MEETING THE NEEDS OF ENTERPRISE APPLICATIONS

What if a single infrastructure could:

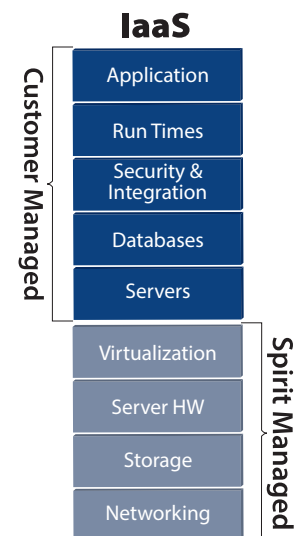

- Enable diverse set of enterprise applications
- Reduce IT costs
- Eliminate complexity
- Increase application availability
- Scale performance and capacity without disruption

An infrastructure capable of doing these things would make life much easier, freeing up IT staff to focus on enterprise applications and higher level business needs. You might even call infrastructure capable of doing all that "invisible."

Spirit's IaaS solution delivers this invisible infrastructure for next-generation enterprise computing, elevating IT professionals by allowing them to focus on the applications and services that power their business.

WHY SPIRIT?

- Lower initial and ongoing cost
- Multi-site replication options
- Our solution is simple and cost effective
- We offer virtualization, hardware, storage and networking in our Cloud - always on and always available
- Customer retains control of their environment with full access to powerful troubleshooting and analytics tools
- From one virtual workload to 1000, Spirit's IaaS solution is massively scalable and designed to meet your needs

Built For Your Business.
