

SPIRIT SIMPLE LAN

PRODUCT SHEET

Is your network becoming complex to manage? Are valued IT resources being pulled from business critical projects to keep up with the headaches of keeping network equipment operational and up to date?

Today's networks traverse the world, supporting applications, databases, users, office and customers. Open architectures connect a multitude of devices and networks. Having the right management tools and skills around-the-clock can help reduce the impact to business productivity.

Leverage the value of Spirit Communications IP networking expertise. Spirit Simple LAN Router, Switch, Wi-Fi and Firewall offers an end-to-end service for transitions, hardware support, systems integration, network monitoring and management of your communications infrastructure.

Simple LAN Managed Router

Spirit Simple LAN Managed Router customers benefit from cost savings and relief from operational headache by transitioning the tasks of router configuration, installation, maintenance and repair. Vital IT resources have more time to dedicate to business-critical projects and core business needs.

Simple LAN Managed Switch

Spirit Simple LAN Managed Switch takes the guess work out of local LAN switch management. Spirit deploys managed Gigabit PoE port switches with the option of 10 Gigabit Fiber based WAN uplinks to allow for optimal speed and efficiency when delivering customer traffic to devices and desktops.

Simple LAN Managed Wi-Fi AP's

Growing Wi-Fi demands can be difficult to keep up with and a headache to manage. Spirit Communications Managed Wi-Fi solution simplifies WLAN setup and management. Provisioning, monitoring, and troubleshooting of Wi-Fi network are handled by Spirit certified Wi-Fi architects and technicians. Spirit has the tools and expertise to conduct a pre and post site survey of your environment to ensure optimum Wi-Fi connectivity throughout your building or campus.

Simple LAN Managed Firewall

Spirit Communications Premise-Based Firewall Managed Service provides a highly functional layer of security to your network(s). The service is a fully managed solution, which includes hardware, software/firmware, configuration, installation, day-to-day maintenance and management. Our certified SOC (Security Operations Center) Technicians support and proactively monitor network traffic and related threats. Spirit managed security solution access for remote needs and defends against unauthorized connectivity to your LAN(s).

Customer Benefits

- Installation and Configuration
- On-going maintenance and upgrades
- Dynamic routing on LAN and WAN
- Scale as customers network needs evolve
- Personalized customer approach from certified technicians and engineers
- Change Management available for network move, adds or changes
- Day of failure replacement of hardware
- 24/7 proactive monitoring, anomaly detection and problem resolution
- Flexible throughput routing and switching options

Built For Your Business.
